TRAIN-THE-TRAINER SERIES · SESSION 3 OF 8

Safe prompting and verification

Right tool for the data. Brief it like a teammate. Check every claim.

7–minute video

Stage 1 · everyone

Guide 1.4 · 4.1 · 5.2 · 3.5

Kinvecta

TODAY

By the end, your learners can…

1
State the one rule and apply it to a real tool

2
Write a prompt like a briefing

3
Verify a draft claim by claim

4
Save a prompt as a reviewed instruction

CHAPTERS · 7 MIN

drawn to scale

Kinvecta

WHY THIS MATTERS

Most AI problems at work start with a habit, not the technology

01

Fluent is not correct

Confident, well-written output can still be wrong. Checking it is the number one gap in the guide.

02

One bad paste

A single paste of confidential data or PII can end a program. Data handling is gap number two.

03

Vague in, vague out

One-line asks get generic drafts, and people give up on the tool.

The question for this session:

How do we use AI safely and trust what it gives us?

Kinvecta

THE ONE RULE

Data only goes into a tool approved for its sensitivity level

Check 1: the data

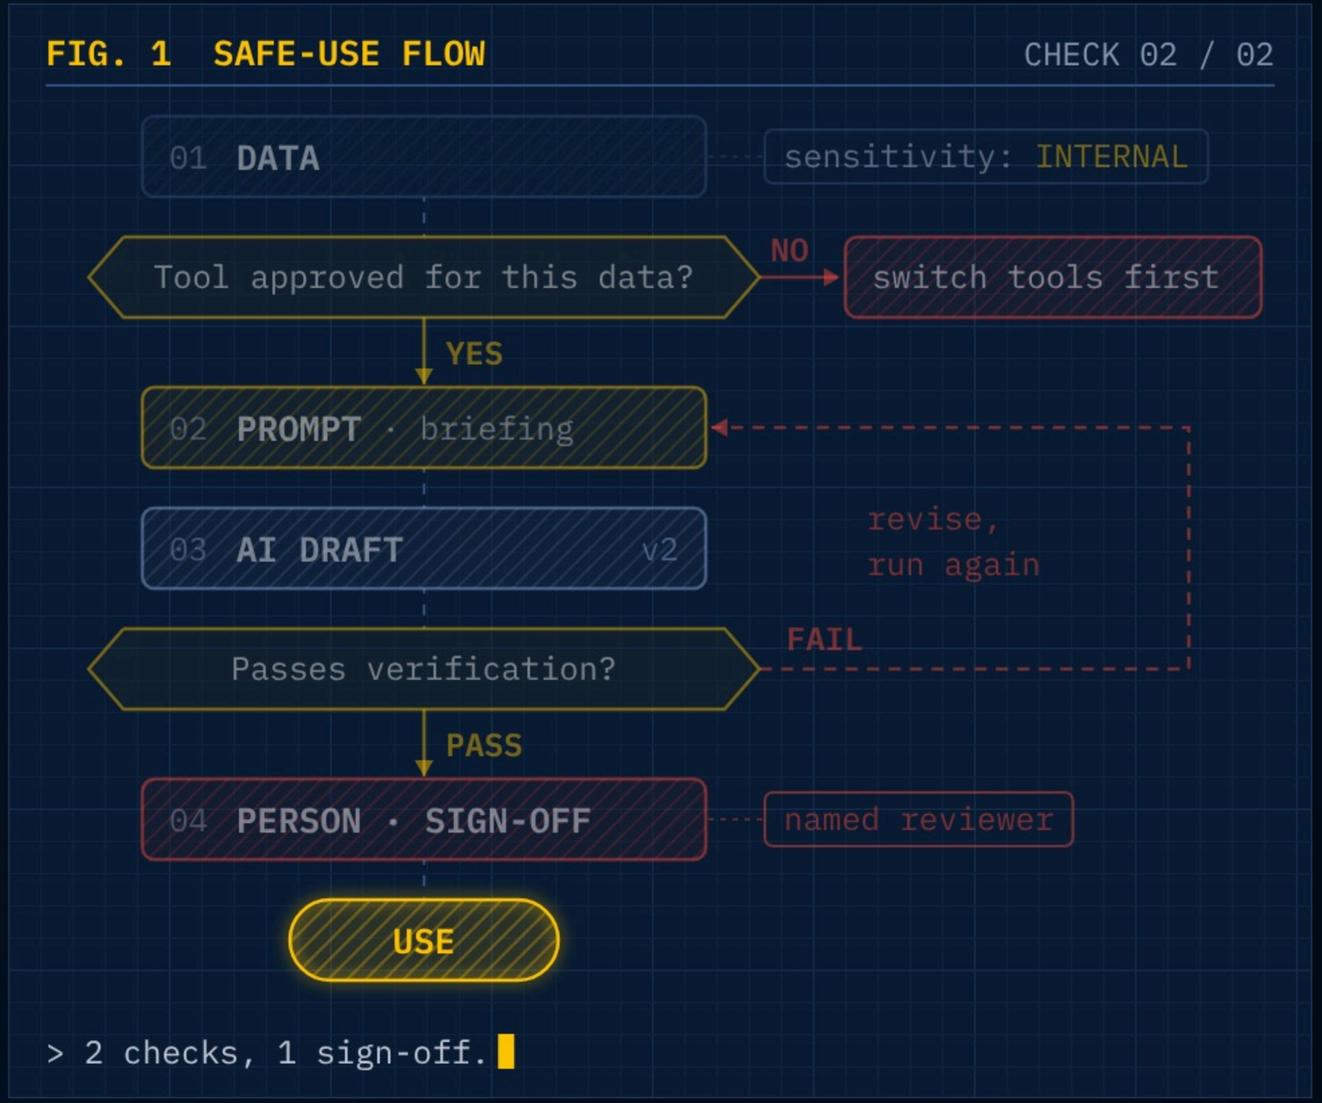

Is this tool approved for this data? If not, switch tools first

Check 2: the draft

Does it pass verification? If not, revise and run it again

Sign-off

A named person reviews before anything is used

Kinvecta

DATA LEVEL × TOOL

Match the data to the tool before you prompt

	Public AI app, not approved	Approved enterprise tool	Tool approved for sensitive data
PUBLIC Already published	Yes	Yes	Yes
INTERNAL Non-public work info	No	Yes	Yes
SENSITIVE PII, confidential, controlled	No	No	Yes

Kinvecta

IF IT GOES WRONG

Pasted something you shouldn’t have? Act fast, and tell someone

01

Stop

Don’t continue the conversation or add more.

02

Report

Tell your security or privacy contact right away.

03

Record

Note what was shared, in which tool, and when.

04

Follow the process

Delete or contain only as your incident process says.

Reporting early is what limits the damage. A quiet delete can make it worse and can break records rules.

Kinvecta

WHAT COMES WITH THE RULE

AI drafts. A person signs.

Human accountability

AI drafts; a person signs. Outputs used in decisions need a named reviewer.

Records and transparency

Label AI-assisted work where required. Prompts and outputs may be records, and subject to FOIA.

Responsible use

Check outputs that affect people for bias. Know your escalation path when something looks wrong.

PROMPTING · STAGE 1

Give the AI what a new teammate would need

Role, task, audience, format

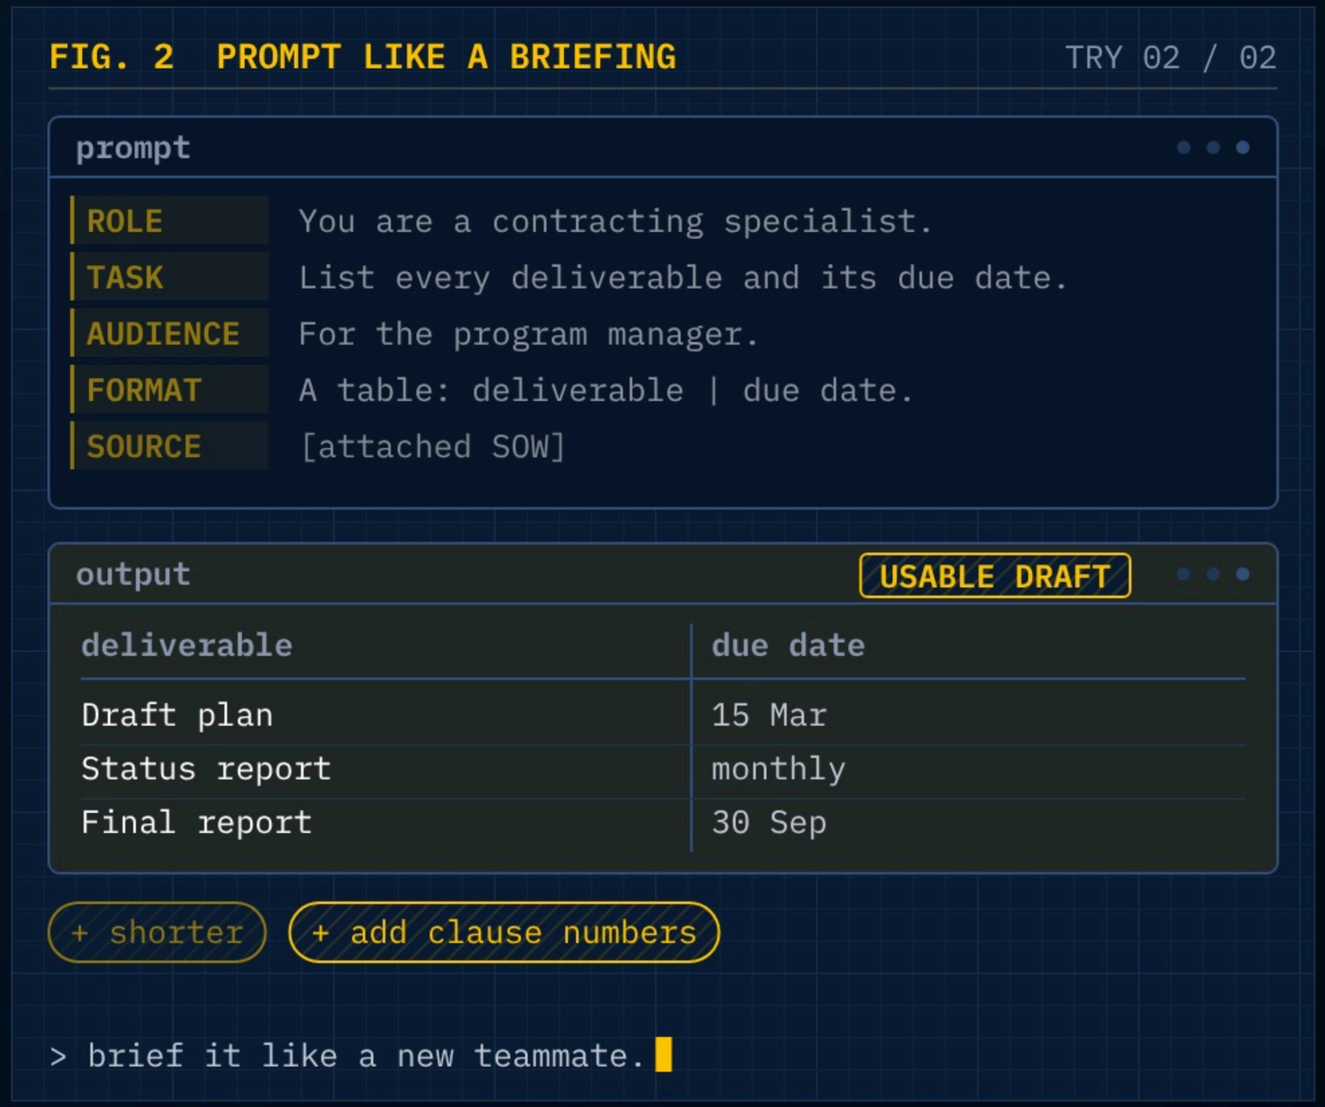

Who it acts as, what to do, for whom, and the shape you want back

Paste the source

Give it the material instead of asking it to recall facts

Draft, then refine

“Shorter.” “Add the clause numbers.” “Rewrite for a senior reader.”

Kinvecta

VERIFICATION

Fluent is not correct: check every claim

Against the source
Trace each date, number, name and quote back to the material

Fix or flag
Correct what's wrong, and mark what you can't confirm

Then sign
Only a checked draft goes to a reviewer

Kinvecta

THE VERIFICATION CHECKLIST

Six things to check before a draft is used

01

Sources

Does each claim come from the material you gave it?

02

Numbers

Every figure, total and unit against the source

03

Names and dates

People, titles, deadlines, version numbers

04

Quotes

Word for word, or marked as a paraphrase

05

What's missing

Anything the source said that the draft left out

06

Tone and bias

Fair to the people it describes, right for the reader

Kinvecta

SAVE WHAT WORKS

A prompt that works becomes a saved instruction

A header

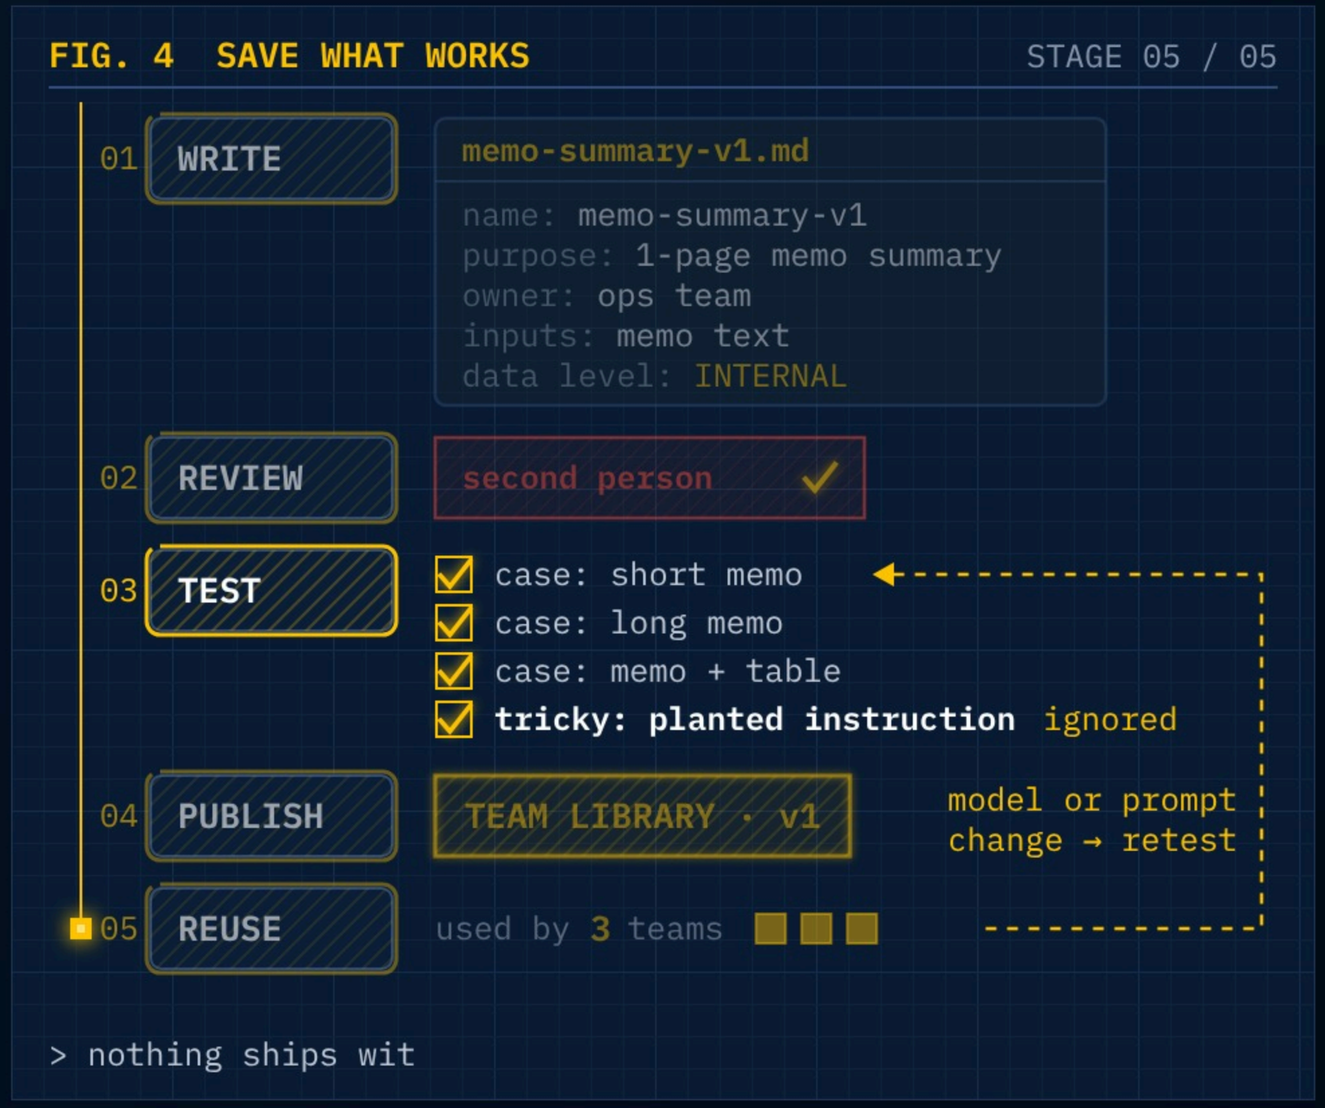

Name, purpose, owner, inputs and approved data level

Review and tests

A second person approves; sample inputs with known-good outputs

Retest on change

A new prompt version or model version sends it back through

Kinvecta

THE RULE OF THUMB

Right **tool** for the data.
Brief it like a teammate.
Check every claim.
A **person** signs.

Two checks before anything is used: the data is cleared for the tool, and the draft passes verification.

Kinvecta

EXERCISE

Brief it, check it, save it

Pause & try

A Brief and verify

Use the sample memo and its AI summary (non-sensitive).

1. Find the 3 errors in the AI summary.
2. Rewrite “summarize this” as a briefing.
3. Run it in an approved tool.
4. Check every claim in the new draft.

B Save it

Turn your briefing into a saved instruction:

1. Name and purpose
2. Owner and inputs
3. Approved data level
4. Two test cases

Kinvecta

CHECK FOR UNDERSTANDING

Can every learner answer these?

1

What is the one rule?

2

What do you do right after pasting something you shouldn't have?

3

What are the parts of a briefing prompt?

4

Name four things to check before using a draft.

5

Who is accountable for AI-assisted work?

6

What makes a prompt ready for the team library?

Kinvecta

NEXT · SESSION 4 · TOKENS, CONTEXT AND HOW AI FINDS YOUR DATA

What can the model actually see when it answers?

What Session 4 covers

- Tokens
- Context windows
- How AI fetches your data
- Cost and speed
